

DeKarra Johnson's CPSP218G Digital Image Processing Software Proof of Concept Exercise

My experience in the Earth, Life, and Time Scholars Program has been wonderful so far. I have learned significant information about how to identify pseudoscience and criticize inaccurate notions of modern science. I have learned about early human history from a scientific standpoint and how it conflicts with society's preconceived ideals of humanity. The trip to the Galapagos Islands enabled me to see intensive conservation efforts as well as natural selection of exotic species beyond U.S. borders. Overall, the ELT has enabled me to become a critical thinker of what goes on in the modern world.
