Physical Biochemistry  
Course Syllabus  
BCHM 485: TuTh, 9:30-10:45am, CHM 2201 (Note Room Change!)  
Spring 2006

Prof.: David Fushman  
Office: Room 1121 Biomolecular Sciences Bldg (#296); voice: x53461,  
e-mail: fushman@umd.edu (much preferred to phone), Please restrict telephone inquiries to  
office hour times, except in “emergencies”. Email is welcome anytime.  
Office hours: Wednesday, 2:00-3:30pm

Teaching Assistant: Aydin Haririnia  
Office hours: Tuesday & Thursday, 1-2pm, Room 1122, Biomolecular Sciences Bldg (#296),  
voice: x58710, e-mail: aydin@wam.umd.edu

Course Description

This is section II of the Physical Chemistry course designed to cover topics of particular  
relevance to problems and applications of physical methods to modern biochemistry. There is  
significant emphasis on various experimental techniques: sedimentation, chromatography,  
electrophoresis, relaxation kinetics, a broad range of spectroscopies applied to biomolecules, and  
on methods for biomolecular structure determination.

Mathematical level required: physical chemistry is a rigorous quantitative discipline. Many of  
the problems and methods discussed throughout the course require familiarity with the following  
mathematical techniques: logarithms and exponentials, trigonometric functions, complex  
numbers and complex functions, basic vector analysis, matrix algebra (including determinants  
and eigenvalue equations), derivation and integration techniques, power series and Taylor  
expansions, differential equations.

Textbooks:  
Required: (Copies of the required textbooks are available in the Chemistry Library)  
(2) David Eisenberg, Donald Crothers, Physical Chemistry with Applications to the Life  

Additional recommended sources: Principles of Physical Biochemistry by van Holde, Johnson  
& Ho; Molecular Driving Forces by Dill & Bromberg; Biophysical Chemistry by Cantor &  
Schimmel.

There is a course homepage at:

http://wam.umd.edu/~fushman/
where you will find a copy of the syllabus, regular homework and reading assignments, exam solutions and statistics, and extra material. Some of these materials will be posted as we proceed with the course. You are welcome to email your questions and comments. I do not guarantee individual responses, but errors or common points of confusion will be addressed in class.

Course Outline
The exact order of topics and the number of lectures on each may change.

1. Quantum Mechanics. (6 weeks)

2. Statistical thermodynamics. (3 weeks).

3. Molecular motion. (1.5 weeks)

3. Chemical and biochemical kinetics. (2 weeks)

4. Diffraction, Scattering. (1 week)
X-ray, electron, neutron diffraction, crystal structures, space symmetry groups. Structure determination of biomacromolecules.

Examinations will be given on the following dates (These exam dates are firm):

<p>| | |</p>
<table>
<thead>

<td>I</td>
<td>Tuesday, March 14</td>
</tr>
<tr>
<td>II</td>
<td>Tuesday, April 25</td>
</tr>
<tr>
<td>Final exam</td>
<td>Monday May 15, 8:00-10:00 am</td>
</tr>
</tbody>
</table>

Grading Policies. Each exam during the semester will be worth 100 points and the final exam will be 150 points. Exams during the semester will include only the material covered since the previous exam but will inevitably draw on information from earlier in the semester. The final will cover the entire course material. The exams will include material covered in the lectures and in the corresponding sections of the textbook. Ten 10-min quizzes worth 10 points each will be given at the end of the lecture every Tuesday, except for the week of a midterm exam and not on the first Tuesday (Jan 31 and Mar 28) after the winter and spring breaks. These quizzes are
designed to encourage your regular reading of the material. In addition, problem sets will be
given as homework regularly: these are optional, however, completing them is likely to be very
helpful in your preparation for the exams. All mid-term exams will be 75 min long and will be
given in the classroom (PHY 1219). You will be allowed to use calculators for computation only.

Your final letter grade will be based on your total score on all quizzes, on the two mid-term
exams, and on the final exam (maximum 450 points). Grading will be done on a curve based on
the overall distribution of the class scores. You will be guaranteed an A if your total score is
85% or better, a B if it is 60% or better and a C if it is above 30% of the class. In addition,
students who scored ≥ 400 points will be guaranteed an A, and those with ≥ 200 points will be
guaranteed a passing grade, independent of the curve. Final grading will then be done using the
“+/-“ grading system, as follows. The cut-offs for A, B, etc grades will be determined first. Then
each letter-range will be divided into three groups: all students whose scores are in the upper
third of, e.g. B range will be given a B+, those in the middle will receive a B, and the lower third
will receive a B-, and so on.

Regrades.
If you think a mistake has been made in grading your work, you must submit it to me for
regrading no later than one week after the date on which the work was returned to the class, with
a written explanation of your reasons for desiring a regrade. The entire exam is subject to
regrading, which often decreases the total score. After that, the grade will be considered final.
Arithmetic errors in the grading can be corrected without regrading.

Make-up exam policy.
Do not miss any of the exams or quizzes. If you miss an exam, you will have a score of “0” on
the exam until it is made up. Only students with legitimate excuses as determined by the
University policy will be given a make-up exam. For a make-up exam you will need a written
documentation of the emergency or illness. A missed quiz will be assigned a score of “0”; there
will be no make-up for a missed quiz.

It is your responsibility to contact me promptly to schedule a make-up exam. In any case,
YOU MUST CONTACT ME WITHIN 24 HOURS OF MISSING AN EXAM.

All students must take the final exam.
Please notify me as soon as possible if you know ahead of time that you will miss an exam for
any reason, including previously scheduled events, religious observances, etc. According to the
University policy you must tell me no later than February 8 (the last day of schedule adjustment
period).

Teaching assistance.
The teaching assistant for this course is Mr. Aydin Haririnia, an advanced graduate student in the
Biochemistry program.
We are happy to help you with the material during office hours. If necessary, we will arrange
other times to meet. A review session will be scheduled before the final exam. If you believe a
mistake has been made in lecture (I guarantee this will happen), please speak up or inform me
afterward. Please ask questions in lecture if something is not clear.
Academic integrity.
"The University of Maryland, College Park has a nationally recognized Code of Academic Integrity, administered by the Student Honor Council. This Code sets standards for academic integrity at Maryland for all undergraduate and graduate students. As a student you are responsible for upholding these standards for this course. It is very important for you to be aware of the consequences of cheating, fabrication, facilitation, and plagiarism. For more information on the Code of Academic Integrity or the Student Honor Council, please visit http://www.studenthonorcouncil.umd.edu/whatis.html." Students are responsible for knowing and understanding the content of the Code.

There will be zero tolerance to violations of the Code of Academic Integrity. Suspected cases will be reported immediately to the appropriate authorities. The standard penalty for violations of the Code of Academic Integrity is a grade of “XF”. Specific guidelines relevant to this course include:

1. All work that you submit for grading in this course (i.e. examinations) must be the original work of the student whose name is on the work.
2. You may use a calculator for most in-class exams, but only for computation. Any other use is a violation of the University’s Code of Academic Integrity.
3. Other actions such as falsification of excuses for missed exams or submission of an altered, graded examination for regrading, etc., are also violations of the Code of Academic Integrity or the Code of Student Conduct.

Honor Pledge
The University of Maryland Honor Pledge reads:

"I pledge on my honor that I have not given or received any unauthorized assistance on this assignment/examination."

The Pledge statement should be handwritten and signed on the front cover of all examination papers submitted for evaluation in this course. Students who fail to write and sign the Pledge will be asked to confer with the instructor. Further information about the Honor Pledge can be found on the web page: http://www.studentconduct.umd.edu/aca/honorpledge.html.
