

Proof of Concept Exercise

My experience in scholars has been a journey for the ages. From the nature of science, to the science of nature, to the secret lives of modern cyborg neo-dinosaurs, every lecture has captured my innate scientific curiosity. I have found ELT to be a bridge between my several biology, chemistry and math courses, giving me a broad perspective on the entirety of my major. I found Dr Merck's lecture on the future of cold fusion as an alternative energy source and Dr. Holtz's "The Certainty of Life on Mars and the Transcendental Lesson's of Vampires" lecture to be especially memorable.
