## Information About My Work Site:

Sevenson Environmental Services, Inc. Baltimore Office 3600 O'Donnell St, Baltimore, MD 21224, (716)-284-0431 Supervisor: Alan Elia

Mission: Use Sevenson's decades of experience since the remediation of Love Canal to provide quality remedial construction across the United States. Goals of My Site: Create bids to successfully persuade clients to choose Sevenson for their environmental remediation needs.

## The Issue Sevenson is Addressing:

- A former pesticide production plant in Jacksonville, Florida is contaminated with various chemicals, arsenic, and TENORM
- The area must be treated and any dangerous substances contained for the betterment of the surrounding areas and the St. Johns River
- The area is classified as a Superfund Site, and as such must be addressed per EPA regulations as well as obeying RCRA and CERCLA
- A proposal must be created to convince the company owning the land to let Sevenson remediate it with a plain approved by the Florida Department of Wildlife
- Plans must take into account any vulnerable or endangered species in the region (eg. Manatees).

### My Duties:

As an intern for Sevenson, I...

- Assisted with estimating project costs for several bids, including the main Jacksonville Project detailed in the "Issues' section
- Aided in the creation of project plans to share with clients
- Created project schedules
- Attended weekly meetings with clients to discuss progress on several projects
- Relayed project information to subcontractors

### Site Impacts:

Sevenson won the bid in Jacksonville, so the work I did helped to make sure the ecosystems around the bid site will not continue to be subject to contamination from the hazardous materials at the site. This internship absolutely left a lasting impact on and left me with...

- New knowledge and appreciation of the work and money that goes into making contaminated sites clean again
- Practice working in a professional setting, as well as communicating across companies and the etiquette that goes along with that
- Improved interpersonal skills when communicating with coworkers and clients alike

A bird-eye view of the site with labelled areas of concern. #### Future Opportunities for Sevenson:

Getting the Jacksonville bid will allow Sevenson to...

- Build its reputation with the client and the Florida Department of Wildlife
- Open the door to new potential bids in the area
- Build on the corporation's set of references
- Show their expertise in environmental remediation
