

CPSG101 Carbon Footprint Infographic

Carbon Footprint Sorted Into Categories for Young Amber

Carbon Footprint Sorted Into Categories for Adult Amber

Differences between current and adult/future Amber:

Area of Difference	Reason for Difference
Household	I believe the increase in carbon emissions is due to the area I plan on living in. I want to live in an area with the zip code 20850 (Rockville, MD), and this area has a lot of unsustainable practices, such as lots of unsustainable construction, which increases every resident's carbon footprint.
Transportation	My transportation emits the same amount of carbon dioxide because I do not plan to change how I will travel on a daily basis. I still plan on driving a car with low mileage as an adult as my main form of transportation.
Travel	My travel emissions will increase because I plan on taking more short, medium, and long round trip flights.
