

Carbon Footprint Infographic

By: Arnav Srivastava

Current Footprint vs. Adult Footprint

Carbon Footprint

Explanation

- The differences in household & food contribution can be explained by living in a dorm vs. a single family home. Since a dorm holds a much larger amount of people, it is slightly more sustainable.
- The differences in transportation is due to me currently living in a dorm, I don't drive around much.
- The differences in travel are for the same reasons listed above and the fact that since I am a student there is less time for vacation or it depends on someone else.
- The large difference in total hectares of forest is caused by living with a family compared to by myself.
