

MY CARBON FOOTPRINT

BROOKE PHILLIPS

Lifestyle

Why do I look different?
What changed

- Less transportation emissions
- Travel ratio
- Totals

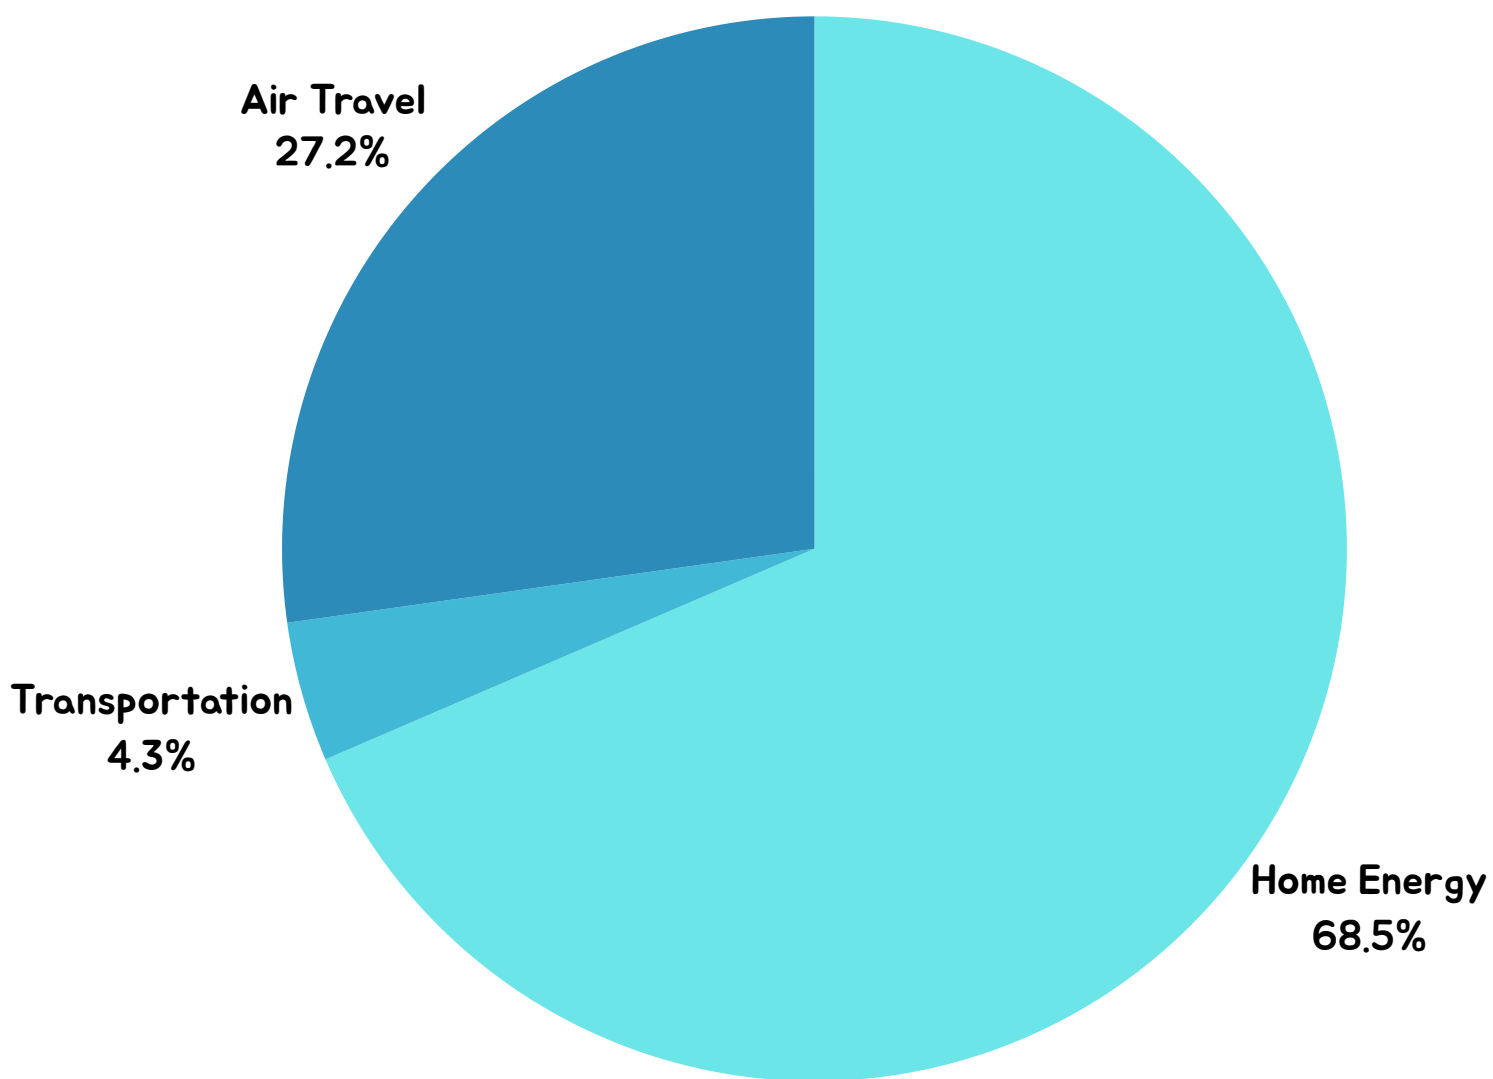

Transportation
Transportation is no longer a part of my emission at 30
→ Owning an electric vehicle as my sole mode of transportation allows me to eliminate my emissions completely at 30 compared to the my current gas vehicle

Do I fly more currently?
No! Due to having a 4 person family, I use more home energy to accommodate everyone while we all emit the same amount from one flight, creating a difference in overall ratios

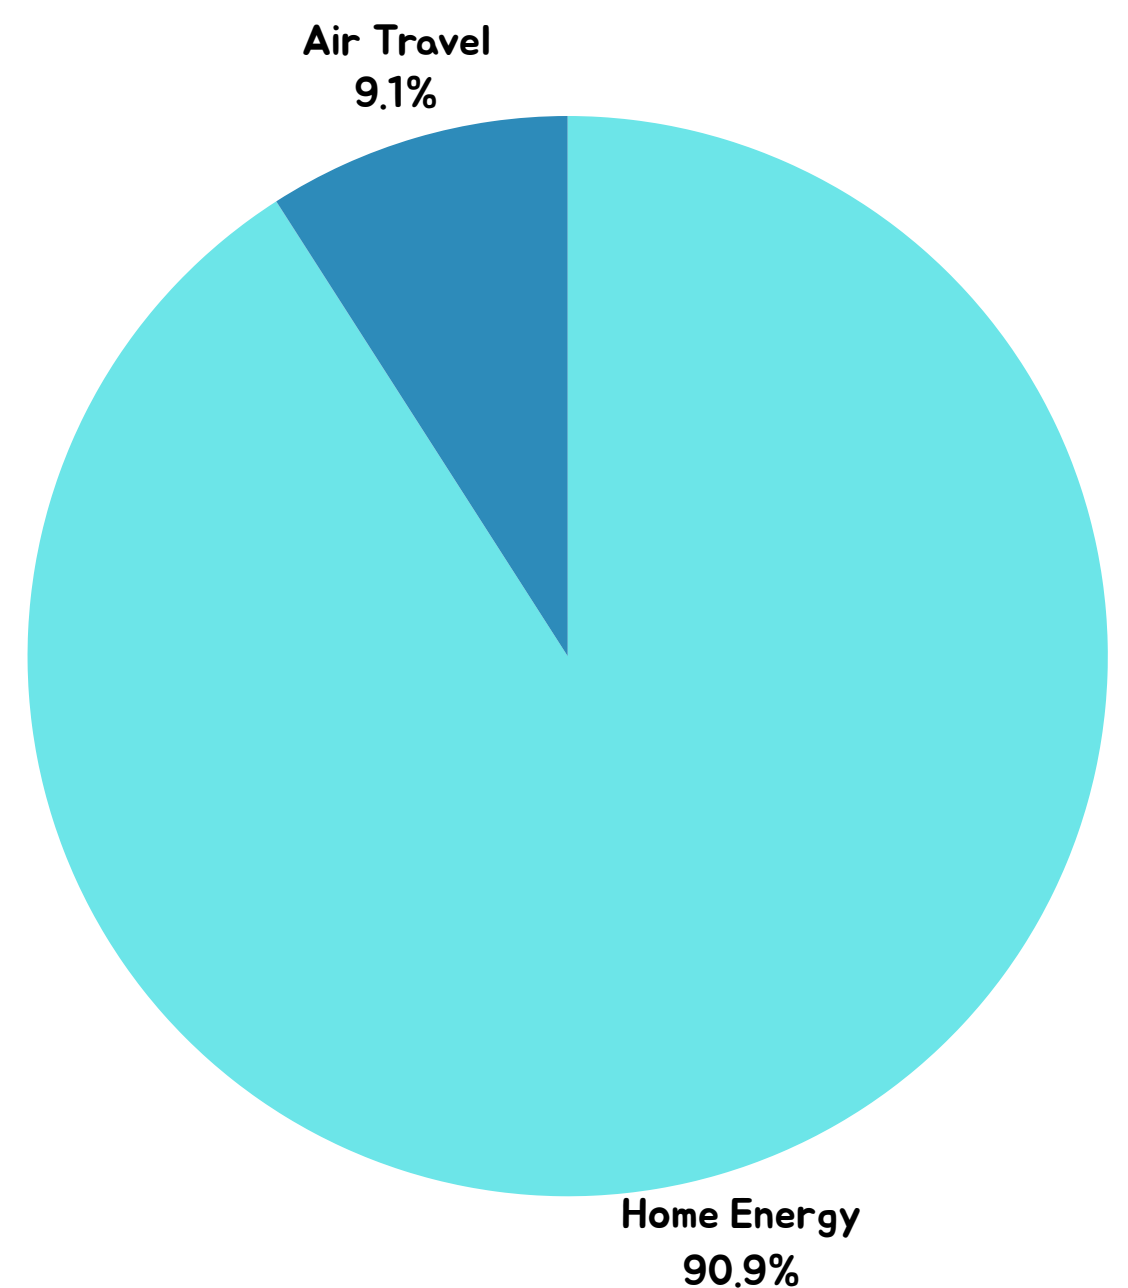

Why are the comparisons so different?
I differ to the average American mainly due to transport. As a college student, I often walk around campus. At 30, I have an electric vehicle which does not add any carbon to the atmosphere.

Current

30-year-old

TOTAL: 10.88t CO2/yr

TOTAL: 22.64t CO2/yr
