Carbon Footprint

Infographic

By: Charles Hammond

The carbon footprint for me in my 30's is much higher than me know.

This can be attributed to the increased use of transportation. I walk a lot now as a college student with no car, but as an adult I will need to drive which will increase my carbon footprint. Now and in the future, I do not anticipate flying much though so my carbon footprint for flight is very low.

Carbon Emissions in Metric Tons per Year of Me Now vs. My Family of 5 in my 30's
