

CPSG101 CARBON FOOTPRINT INFOGRAPHIC

Dustin Flaker

Me Now!

Me in 30 Years
(4 total family members)

A majority of my carbon footprint comes from the food I eat and the place I live. I live with hundreds of other people in an apartment-like building and really don't travel anywhere that isn't within walking distance.

In the future, I would be traveling a lot more, both for work and for vacation. That's why both transportation categories are higher. My overall footprint is much higher as well because there are more of us in the family eating omnivorous food.
