

# CPSG101 Carbon Footprint Infographic

Eric Guernsey

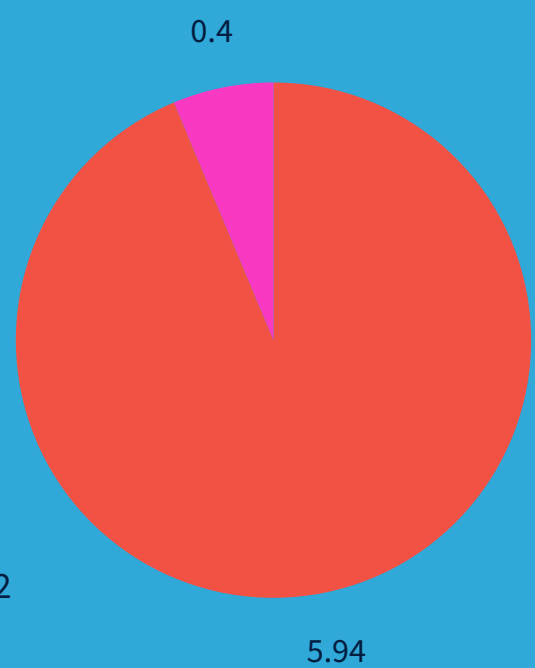

## Current Carbon Emissions

\*In metric tons of CO2

- Household and food footprint
- Transportation footprint

## Future Carbon Emissions

- Household and food footprint
- Air Travel footprint

My current carbon emissions are relatively low overall because I live on campus in a dorm with a lot of people. In addition, I always walk to my classes and I don't have a driver's license, so I don't produce much transportation emissions. Finally, I rarely travel abroad and haven't been in an airplane in over a year.

In the future, I plan to live in a single family home with three others, contributing to a higher household footprint per capita. On the other hand, I plan to drive an electric vehicle, not contributing to carbon emissions. Finally, I plan to travel every now and then, contributing to a higher air travel carbon footprint.
