

# My Future Carbon Footprint

My future household will consist of my future partner and our two children.

We will live in a 1,500-1,999 square foot detached family style home. Mostly using Clean Energy, STAR Energy appliances, recycling, using a programmable thermostat, and cutting beef from our diets.

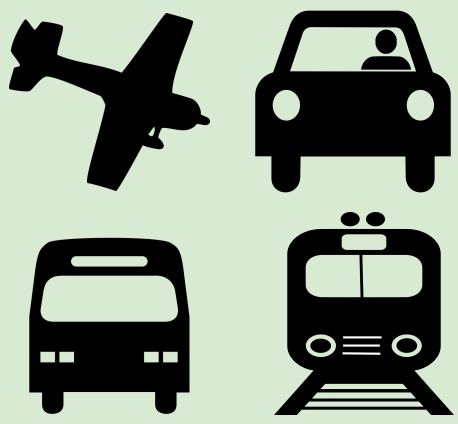

Our Household footprint will be 77.5 trees.

## Transportation

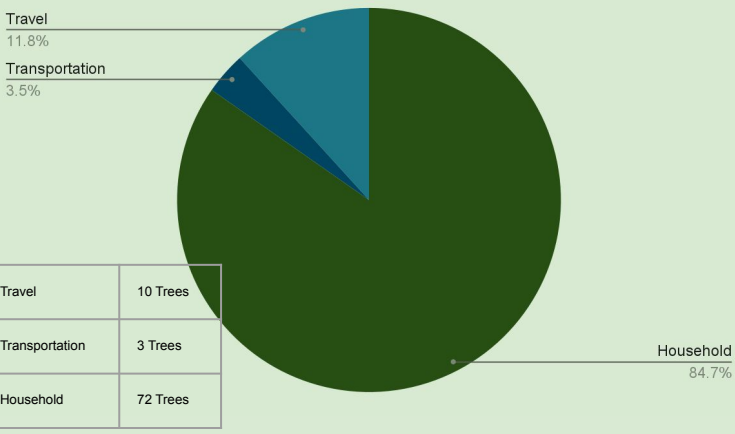

My family will have an electric vehicle with a yearly mileage of up to 5,000 miles and a fuel economy up to 34 MPG. Our Transportation footprint is 0 trees.

## Travel

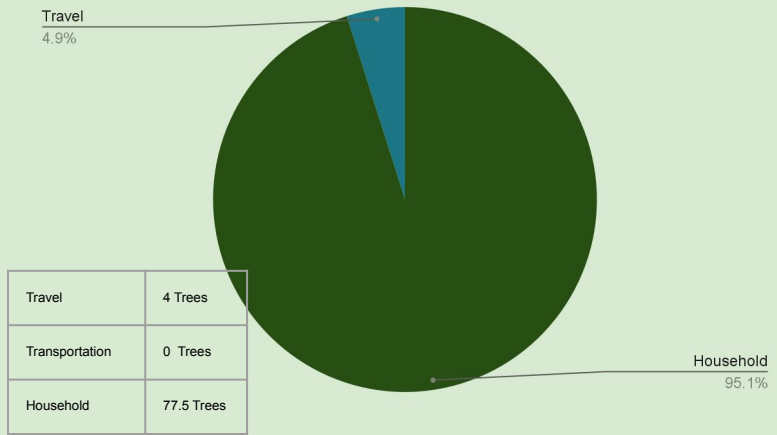

We will take up to 0 long flights, 2 medium flights to 3 short flights every year. Staying in hotels for up to 5-6 days. Our Travel footprint of 4 trees.

Current Carbon Footprint

Future Family Footprint

There are visible differences in the future footprint vs my current footprint. This may be due to my limited ability to make sustainable household choices, due to my living in a university dorm building. Along with this before this project i was less conscious about my lifestyle choices regarding my CO2 emissions, future me will be far more aware and will have a more flexible income to be able to decrease my carbon footprint.
