Sustainability Goals

Our proposed social venture seeks to promote Decent Work and Economic Growth as part of the 17 Sustainable Development Goals of the United Nations. We aim to provide services for non-citizen immigrants who have previously done professional work from their country of origin.

Introduction

The type of work I involved myself in occurred during my social enterprise course where my team and I developed a feasible proposal for a Triple Bottom Line sustainable startup business.

Social Impact Model

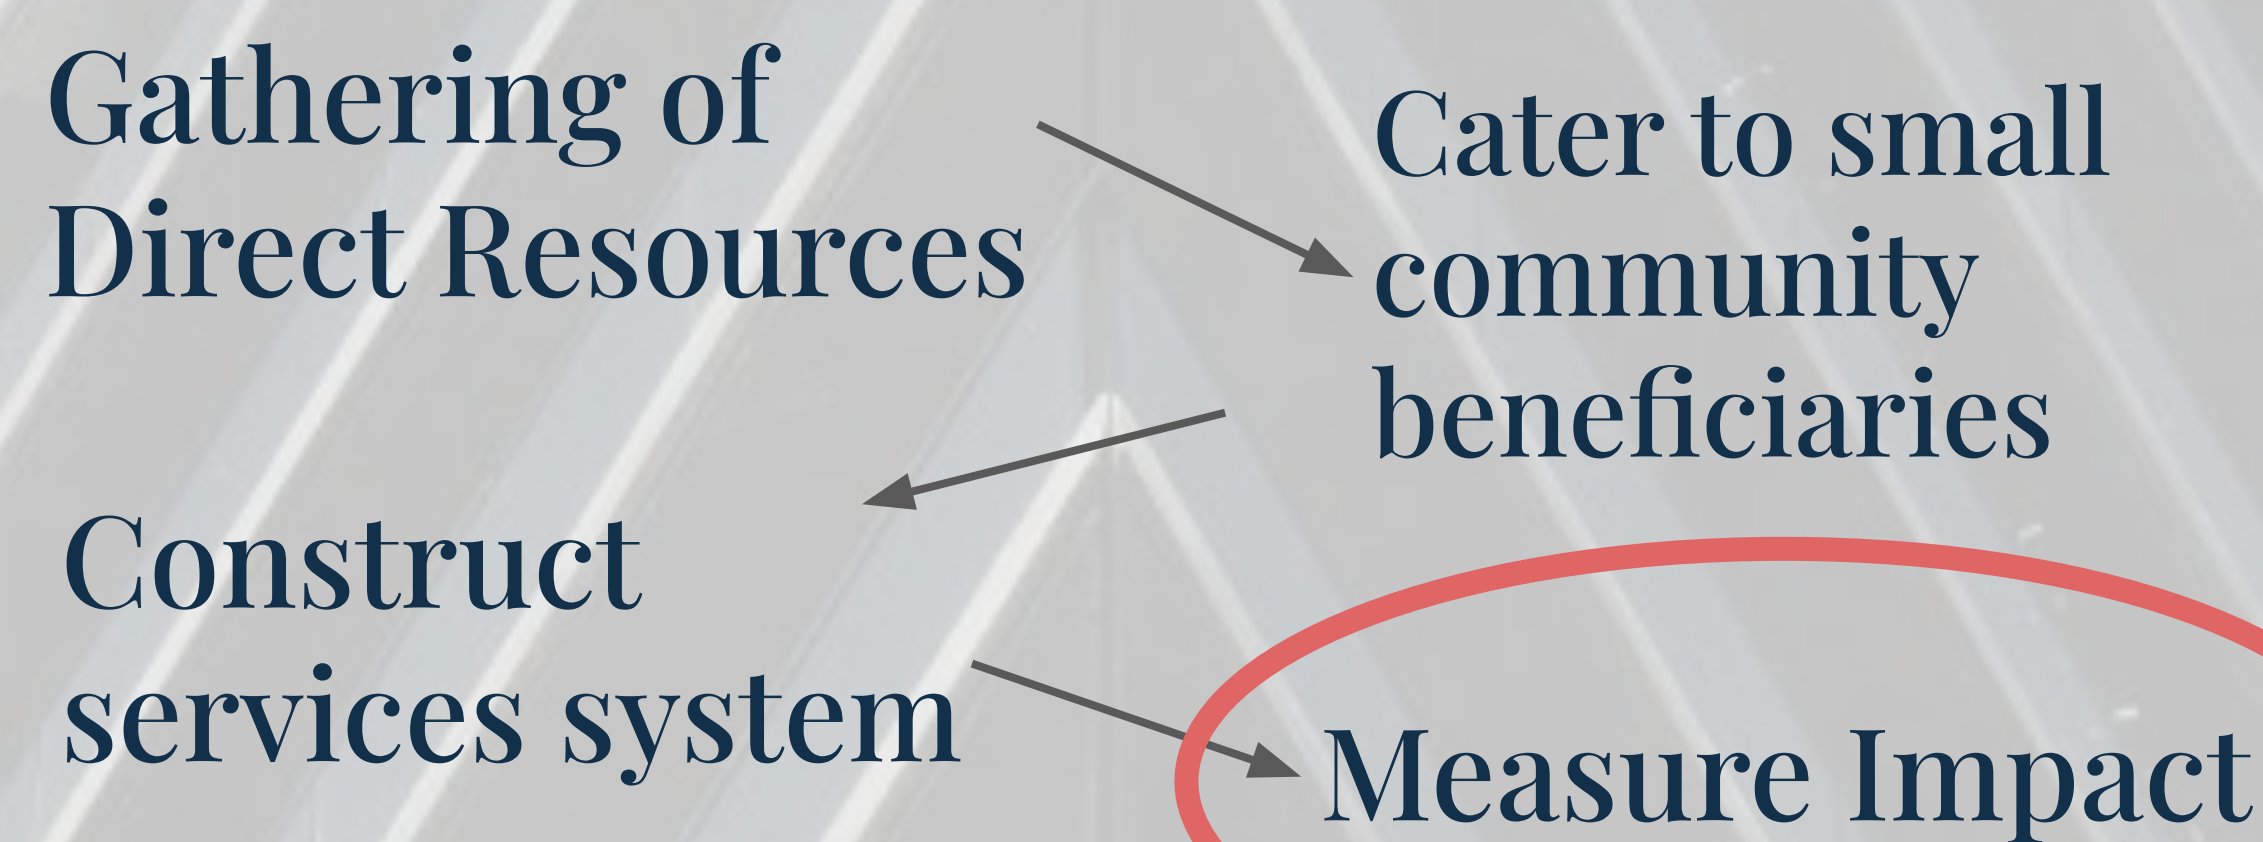

Our tools of measuring Impact will lie in a synthesized arrangement of qualitative and quantitative surveys from our Beneficiaries, as well as supporting factors of employment or lifestyle change.

Our projected Social Impact Model can be outlined through this table:

Investment	Direct Result	Outcome	Impact
\$5,000 Cost of Program	215-25 Riverdale community members coached	Estimated \$10,000-\$20,000 salary increase for trained clients 15-25 new jobs fulfilled	Improved Economic Mobility for Riverdale Immigrant Community

Theory of Change

The steps we plan to take in accomplishing our goals are as follows:

Future Work

If there is anything I gained from this course, it is that balancing economic, environmental, and social sustainability in a social venture requires great level of creativity. The experience I gained from this class allowed me to explore areas of entrepreneurship which I hoped to apply in my future career as a designer.

Acknowledgments

I would like to ensure that my classmates are given credit for formalizing our Blueprint project together.

Though I grew to be more distant from the field of sciences, I still appreciate the efforts Dr.Holtz and Dr.Merck have made teaching us to tools of scientific thinking.
