

CPSG101 Carbon Footprint Infographic

By Juliana Thompson-Williams

As a freshman, I am using the facilities such as the communal bathrooms and my own dorm room. Being in a dorm that holds over 500 people, it is exerting a lot of energy. Me and my family like to travel several times a year and that requires going on the train and flying on a plane. As for transportation goes, I didn't have my car on campus during my time here fall semester but now I do for spring semester.

Per Capita as University Freshman

Difference

Now that I am out of the dorms and living in a single family home that is over 2000 square feet, the energy exerted will be much less than that of a dorm 500+ residents. As for traveling goes, I do plan on traveling more in the future than I do right now so I can see more of the world and I'll have the income to support this. With transportation, I will definitely drive more as I will have to commute to and from work as well as running errands.
