

Kathleen's Carbon Footprint

CPSG101 Carbon Footprint Infographic

Current Footprint:
9.24 Metric Tons of
Carbon Dioxide

Currently, I am a college student living in a dorm. I walk almost everywhere and occasionally use the UMD Transit system around campus. Additionally, I am mostly an omnivore.

The online carbon calculator determined that my current carbon footprint approximately consists of...

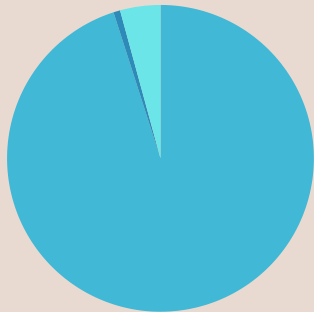

- Household and Food - 4.03 tons of CO₂
- Ground Transportation - 0.03 tons of CO₂
- Air Travel - 0.18 tons of CO₂

Future Footprint:
13.99 Metric Tons of
Carbon Dioxide

What are the differences?
The greatest change in the amount of CO₂ between the present and future is the amount of air travel as I expect to travel more for work along with fewer people in a single household.

■ Household and Food
■ Ground Transportation
■ Air Travel

In the future, I hope to live in a city that relies most on public transportation. I expect to be living with at least one other person and possibly a pet!

The online carbon calculator determined that my future carbon footprint approximately consists of...

- Household and Food - 6.58 tons of CO₂
- Ground Transportation - 0.41 tons of CO₂
- Air Travel - 2.00 tons of CO₂

■ Household and Food
■ Ground Transportation
■ Air Travel
