

Instructions for Competition Experiment in Tanzania

Read these instructions to each participant

Welcome to this experiment. In the experiment you may earn money that will be paid to you privately and in cash at the end.

The task that we ask you to perform today is throwing this ball into this bucket from this line. (*Show them the ball, bucket and line*). You will have 10 tries.

We now ask you to choose one of two options according to which you will be paid in the experiment.

Option 1:

If you choose this option you will get 500 TSH for each time you get the ball in the bucket in your 10 tries. So if you succeed 1 time, then you will get 500 TSH. If you succeed 2 times, then you will get 1000 TSH. If you succeed three times you will get 1500 and so on.

Option 2:

If you choose this option will get a reward only if you succeed more times than the person who is playing in the next room. If you succeed more than this person you will be paid 1500 TSH for every time you succeed. So if you succeed 1 time, then you will get 1500 TSH. If you succeed 2 times, then you will get 3000 TSH. If you succeed 3 times you will get 4500 and so on. But you will only receive a reward if you are better than the person in the next room. If you both succeed the same number of times you will both get 500 for each success.

We now ask you to choose how you want to be paid: according to option 1 (*the experimenter should remind the participants what it is*) or option 2.

The experimenter must record the person's choice at this point.

Now you may play.

The above instructions, translated into Kimaasai
