

# CPSG 101:Carbon Footprint Infographic

## Keshav Narasimhan

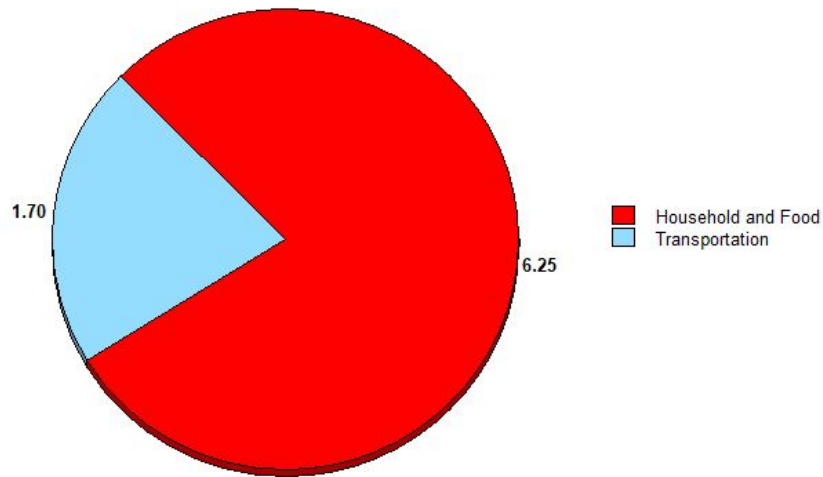

### Individual

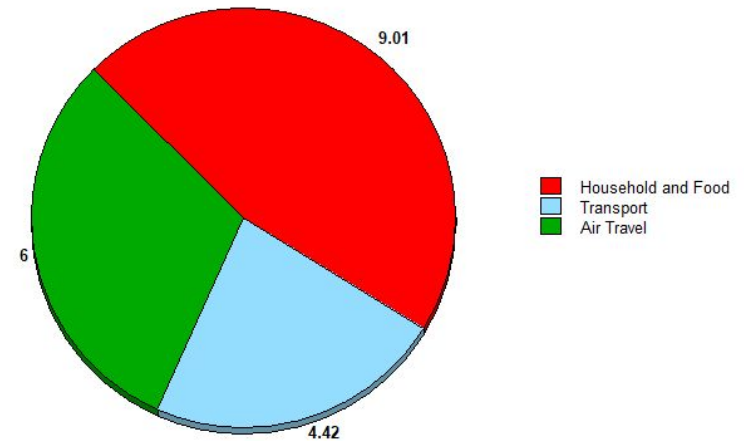

### Family 5 people

**Individual Carbon Footprint in CO2/yr**

**Per capita Family Emissions of CO2 in mt/yr**

Explanation: The reason my numbers for the family are so much higher are because I am now using a lot of car and air travel. The air travel, in green, is especially striking compared to the chart on the left. Additionally, I will be eating a lot more and living in a far bigger house( a mansion ideally), leading to a larger carbon footprint.
