Future: 4 Residents

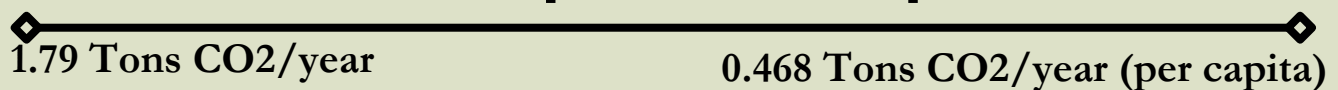

## Total Carbon Footprint

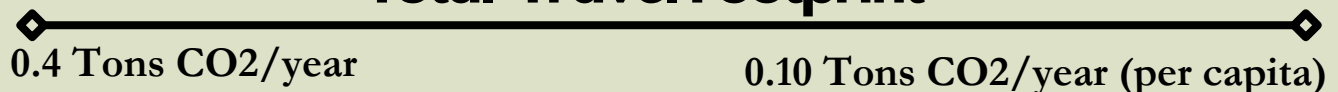

## Total Household Footprint

## Total Transportation Footprint

## Total Travel Footprint

## Differences?

The reason for the smaller per capita footprint in the future versus the large footprint currently is that currently I live with hundreds of other students, sharing a lot of resources together. However for the large total footprint in the future, the reason may be that I'll be traveling a lot for work and recreation, where currently I don't have to travel too much.
