#### On Repair by Ellipsis

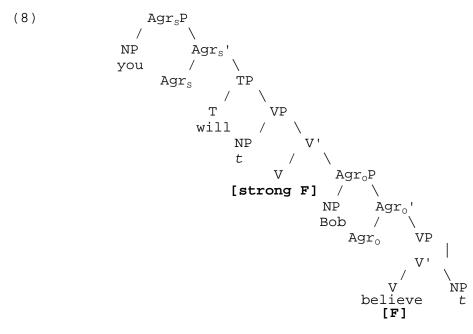

## Howard Lasnik University of Maryland

#### I. Pseudogapping

- (1)a If you don't believe me, you will ∅ the weatherman
  - b I rolled up a newspaper, and Lynn did  $\varnothing$  a magazine
  - c Kathy likes astronomy, but she doesn't  $\emptyset$  meteorology Levin (1978)
- (2)a The DA proved Jones guilty and the Assistant DA will prove Smith guilty
  - b ?John gave Bill a lot of money, and Mary will give Susan a lot of money
- (3) You might not believe me but you will Bob
- (4) NP-raising to Spec of  $Agr_o$  ('Object Shift') is overt in English. [Koizumi (1993), Koizumi (1995), developing ideas of Johnson (1991)]
- (5) Pseudogapping as overt raising to Spec of  $Agr_0$  followed by deletion of VP. [Lasnik (1995b)]

(7) \*You will Bob believe

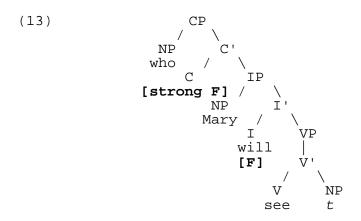

(9) Once the matching feature of the lower lexical V is attracted, the lower V becomes defective (marked \*, if you like). A PF crash will be avoided if either pied-piping or deletion of a category containing the lower V (VP Deletion = Pseudogapping in the relevant instances) takes place. [Lasnik (1999), developing an idea of Ochi (1999)]

### II. Sluicing 1 [Infl raising]

- (10) Sluicing WH-Movement followed by deletion of IP (abstracting away from 'split Infl' details). [Saito and Murasugi (1990), Lobeck (1990)]
- (11) Speaker A: Mary will see someone.

  Speaker B: I wonder who Mary will see.
- (12) Speaker A: Mary will see someone. Speaker B: Who Mary will see?

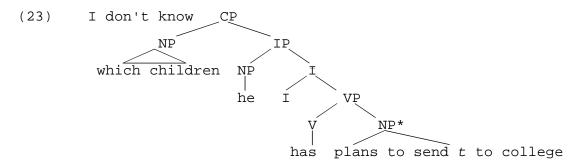

- (14) \*Who Mary will see?
- (15) Who will Mary see?

(16) Assume that matrix interrogative C contains the relevant strong feature, with the matching feature of Infl raising overtly to check it. This leaves behind a phonologically defective Infl, which will cause a PF crash unless either pied-piping or deletion of a category containing that Infl (Sluicing) takes place.

#### III. Sluicing 2 [Island violations]

- (17) I believe that he bit someone, but they don't know who (I believe that he bit)
- (18)a \*I believe the claim that he bit someone, but they don't know who I believe the claim that he bit [Complex NP Constraint, noun complement]
  - b (??)I believe the claim that he bit someone, but they don't know who
- (19)a \*Irv and someone were dancing together, but I don't know who Irv and were dancing together [Coordinate Structure Constraint]
  - b (??)Irv and someone were dancing together, but I don't know
    who
- (20)a \*She kissed a man who bit one of my friends, but Tom doesn't
   realize which one of my friends she kissed a man who bit
   [Complex NP Constraint, relative clause]
  - b(??) She kissed a man who bit one of my friends, but Tom doesn't realize which one of my friends
- (21)a \*That he'll hire someone is possible, but I won't divulge who that he'll hire is possible [Sentential Subject Constraint]
  - b (??)That he'll hire someone is possible, but I won't divulge who All above from Ross (1969)
- (22)a (\*)I don't know which children he has plans to send to college
  - b He has plans to send some of his children to college, but I don't know which ones Chomsky (1972)

- (24) Chomsky suggests that \* (# in Chomsky's presentation) is assigned to an island when it is crossed by a movement operation (the complex NP in (23)). An output condition forbidding \* in surface structures accounts for the deviance of standard island violations.
- (25) If a later operation (Sluicing in this case) deletes a category containing the \*-marked item, the derivation is salvaged.
- (26) For Chomsky (1972) the condition banning \* applies at surface structure. The results are the same if, instead, it is a PF condition, as suggested by Lasnik (1995c), Lasnik (2001).

#### IV. The Case Filter

#### A. Amelioration of a constraint on Japanese ga/no conversion

Saito (2001)

- (27) Taroo-ga / -no itta tokoro
  -NOM -GEN went place
  'the place where Taroo went'
- (28) A Case-marked object blocks <a href="mailto:ga/no">ga/no</a> conversion.
- (29) Taroo-ga /\*-no hon -o katta mise -NOM/ -GEN book-ACC bought shop 'the shop where Taroo bought a book'
- (30) An object relative gap does not block ga/no conversion.
- (31) Taroo-ga /-no  $\underline{e}$  katta hon -NOM -GEN bought book 'the book that Taroo bought'
- (32) A null object does not block ga/no conversion.
- (33) Hanako-ga /\*-no Ziroo-o tureteiku tokoro-wa Nagoya-zyoo -desu -NOM -GEN ACC take place -TOP Nagoya Castle is 'The place that Hanako is taking Ziroo is the Nagoya Castle.'
- (34) Hanako-ga / -no  $\underline{e}$  tureteiku tokoro-wa Nagoya-zyoo -desu -NOM -GEN take place -TOP Nagoya Castle is 'The place that Hanako is taking (him) is the Nagoya Castle.'
- (35) If relative gaps can be null pronouns, as argued for by Perlmutter (1972), Murasugi (1991), then these two instances are one.
- (36) Now suppose these null pronouns are actually the results of ellipsis. Then if the blocking effect is the result of accusative Case checking, failure to check can be repaired by deletion.

#### B. A kind of exceptional Case marking normally available only under A'-movement

- (37) \*I alleged John to be a fool
- (38) Verbs of this class cannot normally license 'exceptional' Case
- (39) ?John, I alleged to be a fool
- (40) ?Who did you allege to be a fool
- (41) But they can under A'-movement (as first discussed by Kayne).
- (42) John, I alleged to be a fool. \*Mary alleged John to be a fool too.
- (43) John, I alleged to be a fool. ?\*Mary alleged him to be a fool too.
- (44) John, I alleged to be a fool. Mary did  $\{allege\ John\ to\ be\ a\ fool\}$  too.
- (45) John in (44) should be in violation of the Case Filter, but it

is fine, evidently repaired by deletion. This, along with Saito's analysis above, suggests the early version (Chomsky (1980)) of Case theory, where the Case Filter reflects a morpho-phonological requirement.

#### V. ECM configurations and Condition B

- (46) \*John; injured him;
- (47) \*John; believes him; to be a genius
- (48) \*Mary injured  $him_i$  and  $John_i$  did too
- (49) ?Mary believes him, to be a genius and John, does too
- (50) Suppose Postal (1966), Postal (1974) was right (contra Chomsky (1973)) that the relevant structural configuration for such obviation is based on the notion clause-mate. (For related discussion, see Lasnik (In press).)
- (51) Weak pronouns must cliticize onto the verb.
- (52) The detective brought him in
- (53) \*The detective brought in him Chomsky (1955)
- (54) Failure to cliticize in (49) is repaired by ellipsis.
- (55) In (48), on the other hand, the pronoun and its antecedents are clause-mates independent of cliticization.

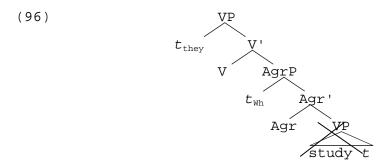

# VI. Failure of repair

### A. Island violations - VP ellipsis

- (56) \*They want to hire someone who speaks a Balkan language, but I don't know which they do [ $_{VP}$  want to hire someone who speaks t] Merchant (1999)
- (57) Compare (58), which also involves a relative clause island:
- (58) They want to hire someone who speaks a Balkan language, but I don't know which (Balkan language) [ IP they want to hire someone who speaks t] Merchant (1999)
- (59) It appears that a certain senator will resign, but which senator [it appears that t will resign] is still a secret [adapted from Merchant p.219]
- (60) Sally asked if somebody was going to fail Syntax One, but I can't remember who [Sally asked if t was going to fail Syntax One] Merchant p.219, from Chung et al. (1995)
- (61) She said that a biography of one of the Marx brothers is going to be published this year, but I don't remember which [she said that a biography of t is going to be published this year] [adapted from Merchant p.220]

- (64) \*She said that a biography of one of the Marx brothers is
   going to be published this year, but I don't remember which
   she did [say that a biography of t is going to be published
   this year] [subject condition]
- (65) Now notice that parallel 'failure of repair' obtains even when there was no violation in the first place.
- (66) Extraction out of an embedded clause is typically fine and Sluicing is just as good, but VPE is bad:
- (67) They said they heard about a Balkan language, but I don't know which Balkan language they said they heard about
- (68) They said they heard about a Balkan language, but I don't know which Balkan language
- (69) \*They said they heard about a Balkan language, but I don't know which Balkan language they did
- (70) Similarly for extraction out of an object NP:
- (71) They heard a lecture about a Balkan language, but I don't know which Balkan language they heard a lecture about
- (72) They heard a lecture about a Balkan language, but I don't know which Balkan language
- (73) \*They heard a lecture about a Balkan language, but I don't know which Balkan language they did
- (74) Even short movement of a direct object shows rather similar behavior:
- (75) They studied a Balkan language but I don't know which Balkan language they studied
- (76) They studied a Balkan language but I don't know which Balkan language
- (77) ??They studied a Balkan language but I don't know which Balkan language they did
- (78) Is VPE blocked when Sluicing is available (Sort of 'Delete as much as you can')?
- (79) Someone solved the problem. Who (?did)?
- (80) Is a VPE site precluded from containing a WH trace?
- (81) I know what I like and what I don't Merchant p.69 [See Fiengo and May (1994) for similar examples.]
- B. Towards a Solution [This section is based on joint work with Danny Fox, Fox and Lasnik (2001)]
- (82) The constraint seems to be specific to VPE, and seems limited specifically to circumstances where an indefinite antecedes a WH-trace. In fact, in other circumstances, VPE can even repair actual island violations:
- (83) \*[How interesting] did Brio write [a t novel]
- (84)a Pico wrote a more interesting novel than Brio did
  - b Pico wrote a more interesting novel than [Op Brio did write a towel] Kennedy and Merchant (2000)

- (85) Fred said that Mary talked to a certain girl, but I don't
   know which girl <<del>Fred said that Mary talked to t</del>>
- (86) The Parallelism required for ellipsis is satisfied since the variables in the antecedent and the elided clause are bound by parallel operators and from parallel positions.
- (87) Now notice that in the structure, there are no intermediate traces in the elided portion (in angle brackets), indicating that there were no intermediate landing sites in the movement.
- (88) If there had been successive movement, under plausible assumptions the relevant portions of the antecedent and the ellipsis site would not be parallel, and this would prevent ellipsis.
- (89) But why is there no 'repair' with VPE?
- (90) VPE involves deletion of a smaller constituent than the clause that is elided in sluicing (VP vs. TP):
- (91) which girl [ $_{TP}$  he T [ $_{AspP}$  did  $<_{VP}$  say that I talked to g(girl)>]]
- (92) \*Fred said that Mary talked to a certain girl, but I don't know which girl he did
- (93) The unacceptability of VPE follows if we assume that one of the two remaining maximal projections, AspP or TP, is an 'island' that must be circumvented by adjunction or repaired by deletion. [This roughly follows the claim of Chomsky (1986a) that all XPs are potential barriers.] Since the island is not deleted, the escape hatch is required, and a violation of Parallelism is unavoidable, assuming that movement is not allowed to proceed in one long 'island-violating' step followed by short successive steps. (Metaphorically, when you enter the subway, you must choose the express or the local.)
- (94) The somewhat less degraded status of very short movement cases such as (77) can now possibly be explained in terms of Pseudogapping (a variant of VPE where the survivor is first raised out of the inner VP in a shell structure, and that inner VP is deleted). The WH-trace can be completely outside of the ellipsis site. If I am right that the raising of the survivor is A-movement, it follows that long distance instances will not be possible.
- (95) [ $_{\text{CP}}$  which Balkan language [ $_{\text{TP}}$  they T [ $_{\text{AspP}}$  did [ $_{\text{VP}}$   $t_{\text{they}}$  [ $_{\text{AgrP}}$   $t_{\text{Wh}}$  [ $_{\text{VP}}$  study t]]]]]]

#### C. Long A-movement and VP ellipsis

- (97) \*Susan thought Mary studied Bulgarian and John did think Mary studied Macedonian
- (98) A-movement from a Case checking position is barred.
- (99) We must "prevent a nominal phrase that has already satisfied the Case Filter from raising further to do so again in a higher position." Chomsky (1986b, p.280)
- (100) "...a [-Interpretable] feature is 'frozen in place' when it
   is checked, Case being the prototype." Chomsky (1995,
   p.280)
- (101) \*my belief [John to seem [t is intelligent]
- (102) "... a visible Case feature ... makes [a] feature bundle or
   constituent available for 'A-movement'. Once Case is checked
   off, no further [A-]movement is possible." Lasnik (1995c,
   p.16)
- "If uninterpretable features serve to implement operations, we expect that it is structural Case that enables the closest goal G to select P(G) to satisfy EPP by Merge. Thus, if structural Case has already been checked (deleted), the phrase P(G) is "frozen in place," unable to move further to satisfy EPP in a higher position. More generally, uninterpretable features render the goal active, able to implement an operation: to select a phrase for Merge (pied-piping) or to delete the probe." Chomsky (2000, p.123)
- (104) Pseudogapping is A-movement of the survivor (to Spec of  $Agr_0$ ) followed by VP ellipsis.
- (105) 'Object shift' is optional in English. Hence [ $_{\rm V}$  V DP] must be a Case checking configuration.
- (106) 'Long' Pseudogapping involves impossible A-movement from a Case position. This is not an island violation.
- (107) But what of 'short' Pseudogapping?
- (108) "... all operations within the phase are in effect simultaneous." Chomsky (2001)
