Present Day Values (in tons CO₂):

- Household and food: 3.75
- Transportation: 0
- Air Travel: 2

Present Day Values (in tons CO₂):

- Household and food: 3.91
- Transportation: 0.16
- Air Travel: 0.4

Why The Difference?

Firstly, the utilities for a detached single family home are serving a less densely populated building than a college dorm.

On top of this, as a student that lives on campus and has an electric car that is used infrequently, the transportation emissions are practically nonexistent. This can't be achieved by a working household in a single family home.
