Current

Future

VS

Food	4.03 Metric Tons
Transportation	0.01 Metric Tons
Travel	0 Metric Tonss

Food	15.47 Metric Tons
Transportation	9.35 Metric Tons
Travel	0.56 Metric Tons

When comparing my current Carbon Emission to the future they differ and it makes senses. I currently live on a green campus that is walkable and I dont typically travel so it makes sense for my Carbon emissions to be so low.

In the future that will change and in part that's due to the change of location, but it's also due to having a family. I plan to travel and my kids will definitely need transportation for school and other events which will increase our total carbon emissions.
