CPSG101 Carbon Footprint Infographic

Present

INDIVIDUAL

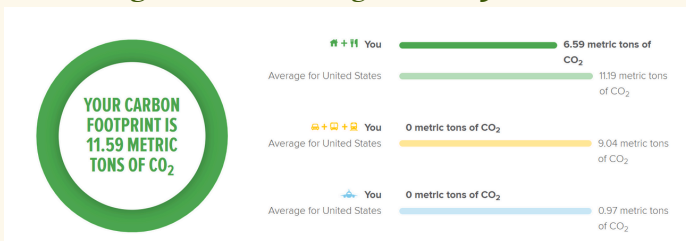

RESNDENTS HALL: JOHNSON-WHITTLE

Household: 2 people

- Me
- Partner

Housing: Detached Single Family Home

Future

Compare

Individual is lower but why:

- Living on a campus dorm lessens the amount of energy and traveling I'm doing.
- Energy is regulated and share with 30+ around people per floor
- UMD is a walking campus most to everything I need is within walking distance.

More into the Future:

- The overall break down is very different for the Individuals.
- Main difference is having a partner and single family home with that the Carbon Footprint increase.
- Another thing that was different was traveling, so I see myself with an electric car in the future so my travel print is low.
