4.133*

tons CO2/yr

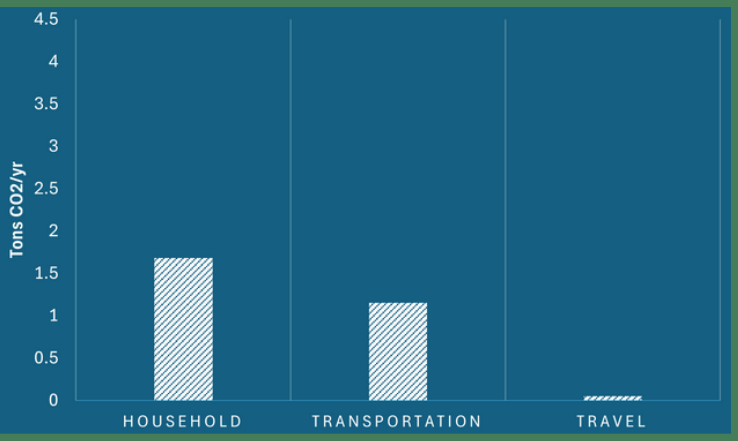

Present Day

9.83

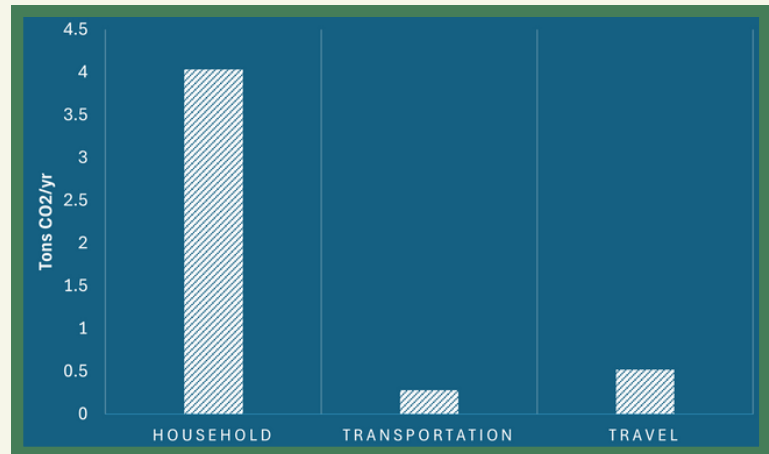

tons CO2/yr

*: 4 people in household

Breakdown of emissions

15 years later

Present

The differences in the footprint come from the fact that in 15 years I would live in a smaller residence (4 people) with less people than I do now (545 people). I would also use more transportation per capita in the future (mainly cars), but I do plan on traveling more by flight in the future as well.
