

# CPSG101 Carbon Footprint Infographic

BY : PRINCESS ATUD

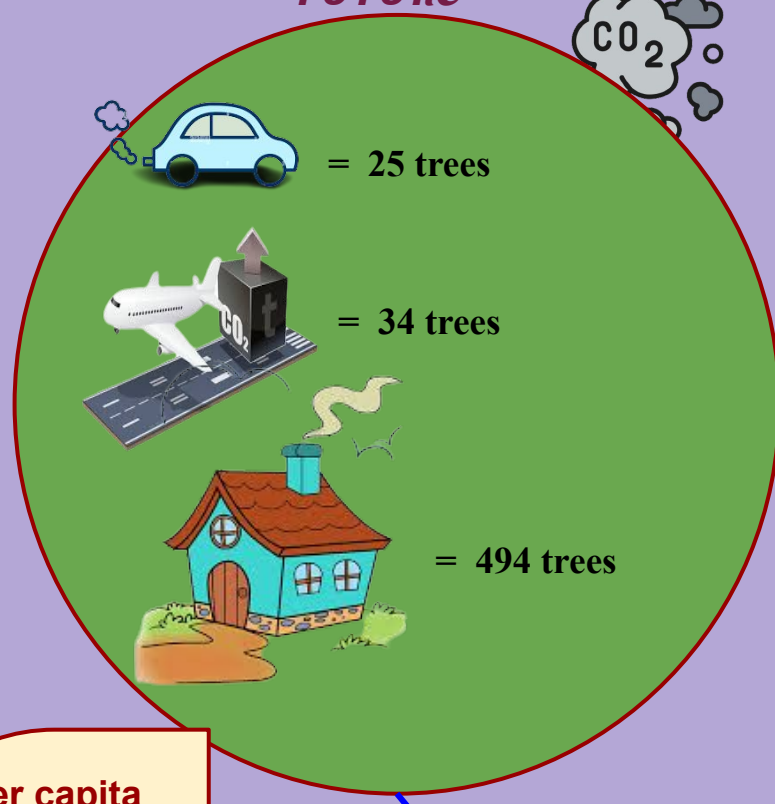

## PRESENT

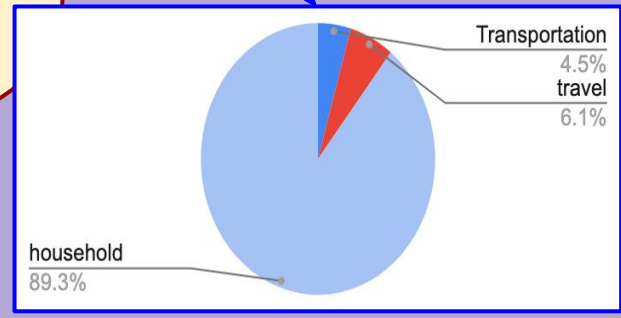

**Per capita footprint:**  
10.4 tons CO<sub>2</sub> / year

## FUTURE

**Per capita footprint:**  
54.66 tons CO<sub>2</sub> / year

## DIFFERENCE BETWEEN MY CURRENT AND FUTURE FOOTPRINTS

There is a significant difference between my current and future carbon footprints because my future footprint accounts for a sum of 6 people. Hence more activities are bound to occur in other to sustain the family which would eventually lead to a greater amount of carbon footprint as shown in the figures above. Currently, as a college student, my travel rate is currently low, but however, I intend to travel a lot more in the future which again will add to the overall carbon emission of my future household.
