

PopIT: Scalable Computational Analysis of the Diffusion of Technological Innovations

Ping Wang
Kenneth R. Fleischmann
Douglas W. Oard

Outline

- **Who** Project team and sponsors
- **When** History and project duration
- **Why** Project goals
- **What** Three thrusts of research
- **How** Interdisciplinary collaboration
- **What** Publications and working papers
- **Where** Next steps, locations, contact info

Who Are We?

 Ping Wang PI	 An-Shou Cheng Graduate Student	 Samer Faraj Advisor McGill University
 Ken Fleischmann Co-PI	 Asad Sayeed Graduate Student	 Rob Fichman Advisor Boston College
 Doug Oard Co-PI	 Chia-jung Tsui Graduate Student	 Burt Swanson Advisor UCLA
 Philip Resnik Senior Personnel	 Tiffany Chao Undergrad Student	 Allison Brochu Alumna
 Emi Ishita Visitor-Japan	 Ederlyn Lacson Undergrad Student	 Lidan Wang Alumna
 Xin Jin Visitor-China	 COLLEGE OF INFORMATION STUDIES	 Yejun Wu Alumnus

3

PopIT History

- ▣ 2006-11-22: Ideas at Thanksgiving dinner
- ▣ 2007-02-21: Proposal submitted
- ▣ 2007-09-15: Project funded by NSF
- ▣ 2007 Fall: eInnovation reading group
- ▣ 2007-12-13: Project officially launched
- ▣ 2010-08-31: Project ends (estimated)

4

PopIT Goals

- ❑ To understand the dynamic social system and processes underlying the development, diffusion, and use of IT innovations
 - **Popularity** of IT innovations (Wang) 
 - **Values** and IT (Fleischmann) 
- ❑ To integrate **computational** analysis of text with theory building and testing in social science research
 - **4th Generation** Content Analysis (Oard/Resnik) 

5

IT Innovation Is ...

- ❑ Information technology **perceived** as new by adopter
- ❑ Vital to economy and society, especially in tough times (recession is fertile ground for innovations)
- ❑ **Developed, disseminated, and used** in and by social system and processes
 - Social **structure**: network, community, hierarchy
 - Social **cognition**: value, sentiment, learning

6

Popularity of IT Innovations

- ▣ Popular innovations address popular **problems**
- ▣ Differentiated social **status** in the networks of actors partially explains the popularity and success of innovations
- ▣ Different **relationships** among innovations have different influences on the trajectories of innovations
- ▣ Different social groups take turns to serve as **opinion leaders** either promoting or denouncing an innovation during the course of its life cycle

Wang, 2008; Wang & Swanson, 2008; Wang, 2009

9

IT Innovation Discourse

- ▣ Discourse both reflects and constructs reality
- ▣ Similar innovations → similar discourse → related popularity?
- ▣ Data: *InformationWeek* articles (1998-2007) Lexis/Nexis
- ▣ Discourse content
 - Apply Kullback–Leibler (KL) divergence to measure the difference between innovation discourses
 - Apply multidimensional scaling (MDS) to the KL divergence matrix for visualization
- ▣ Volume
 - Tally articles assigned to each subject in Lexis/Nexis

10

Discourse Content Similarity

IT
Popularity

Discourse Content Similarity

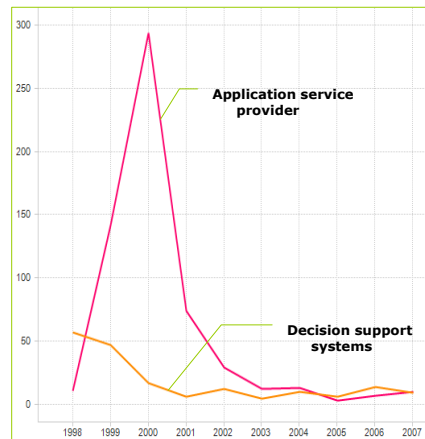

IT
Popularity

Popularity (Discourse Volume)

H1: Trajectories of similar innovations are correlated

H2: Trajectories of dissimilar innovations are uncorrelated ¹³

Content Analysis

- "... any technique for making **inferences** by objectively and systematically identifying specified characteristics of messages ..." (Holesti, 1969)
- "... the study of **recorded** human communications such as books, Web sites, paintings, and laws ..." (Babbie, 1975)
- "... a summarizing, **quantitative** analysis of messages that relies on the scientific method ..." (Neuendorf, 2002)

Content Analysis Generations

4G
Content
Analysis

- G1** Read and understand something
- G2** Manually infer something, then count it
- G3** Directly observe something, then count it
- G4** Automatically infer something, then count it

15

Build Tools, not “Solutions”

Analysis

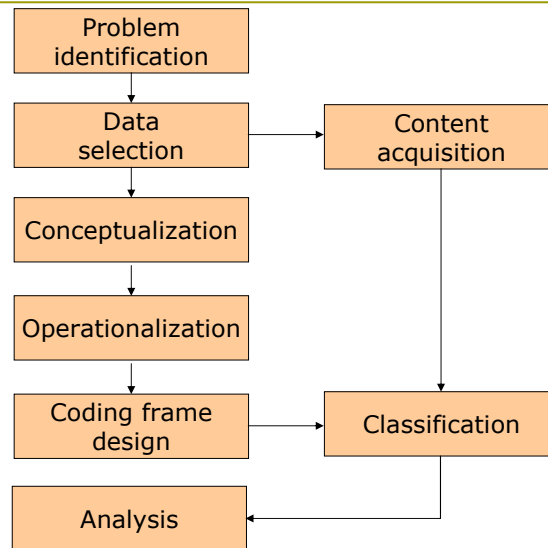

"DON'T GET SMART WITH ME!"

Cartoon by Carroll Zahn, Original Artist

16

2G Content Analysis

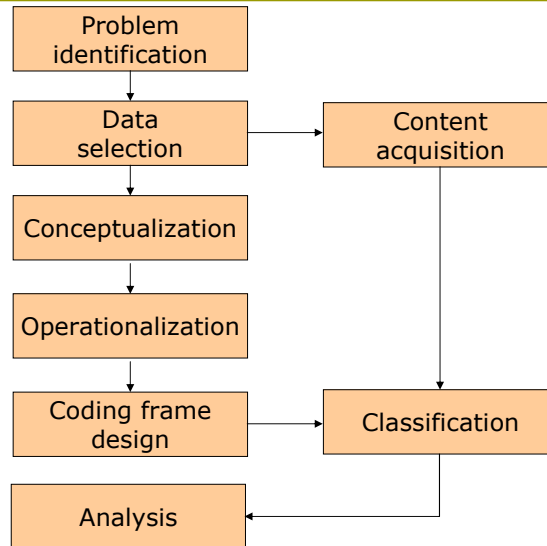

17

3G Content Analysis

- ❑ Computer-Assisted Text Analysis (CATA)
- ❑ "Dictionary-based" word counting
 - Person or organization names
 - Positive and negative sentiment terms
- ❑ Vastly more scalable than manual coding
 - Alias list can accommodate synonymy
 - Focused domain can limit homonymy effects
 - Regression models context-dependent effects

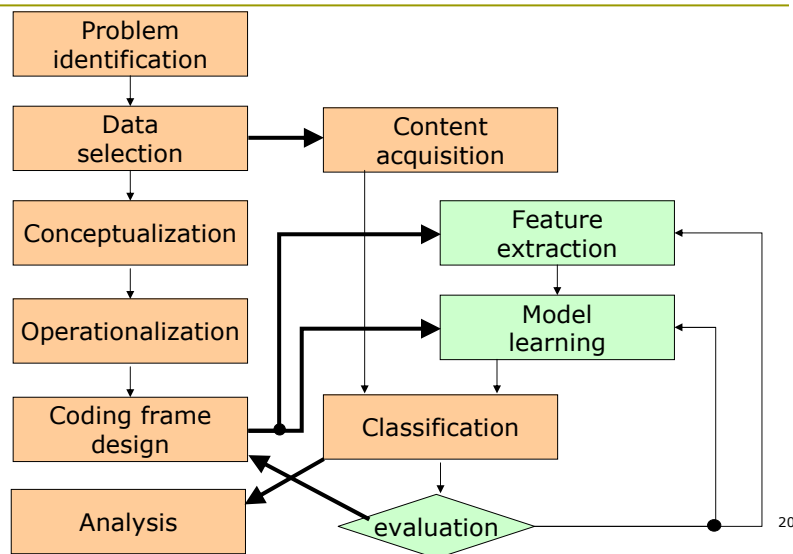

18

Values in IT Design, Use & Policy

Values
& IT

- Study the role of values in
 - Design and use of IT
 - Telecommunication policy
- Survey method is insufficient
- Manual content analysis helps, but ...
 - Sentence-level closed-coding of public hearings on net neutrality following the Schwartz Values Inventory (Schwartz 1992)
- Automatic detection and classification affordably enables macro-scale social science research
 - Build and apply value classification systems to study how values influence IT design, use, and policy

30

Fleischmann 2007; Fleischmann, Oard, Cheng, Wang, & Ishita, Working Paper; Cheng & Fleischmann, Working Paper

Manual Coding for Training

Values
& IT

(Against this backdrop, we have allegations that broadband providers are exercising increasingly greater control over the applications and content accessed by their customers.) (The Commission has pending before it several proceedings – petitions for declaratory ruling and for rulemaking, and formal complaints – which argue that broadband providers have intentionally and secretly degraded applications in a way that undermines the open and interconnected character of the Internet.) We also will hear concerns about the provisioning of wireless text messaging short codes, where we have seen providers refuse service to groups that were deemed “controversial.”

(We now face difficult questions about our role in preserving the unique characteristics of the Internet.) (Those questions are made harder by the Commission’s recent efforts to reshape the legal framework that we have operated under since the dawn of the Internet.) The effect of those decisions is that we have cast doubt about the rules of the road and left open questions about what protections apply.)

31

Recording Codes in ATLAS.ti

Values
& IT

The screenshot shows the ATLAS.ti software interface. The main window displays a text document with several paragraphs of text. The text is highlighted in yellow, and various codes are written in the margins. The codes include: "social power", "authority", "freedom", "equality", "fairness", "social justice", "broad-minded", "social order", "helpful", "honest", "family security", "wealth", "honest", "peaceful life", and "family security". The right-hand pane shows a list of codes with their corresponding counts. The list includes: "social power" (1), "authority" (1), "freedom" (1), "equality" (1), "broad-minded" (1), "social order" (1), "helpful" (1), "honest" (1), "family security" (1), "wealth" (1), "honest" (1), "peaceful life" (1), and "family security" (1). The bottom status bar shows the file path: "F:\1 - atlati\atlati-041708.txt -> <RUFATH-Adelstein-041708.txt".

32

Weka “Training Data”

Values
& IT

17	A0-Authority	We also need a strong commitment to monitoring and enforcing compliance on a case-by-case basis.
18	A1-Successful	These would be significant steps toward reaching the full promise of the Internet.
19	C1-Helpful	As the Commission has eliminated its traditional safeguards new questions are also emerging about consumers rights in this broadband world.
20	C1-Honest	The recent allegations have raised concerns about level of transparency and disclosure between broadband providers and their consumers.
21	C1-Honest	I come to this issue with a strong presumption that broadband providers should provide clear and accurate information in plain English about their policies and how they affect consumers use.
22	D2-Family security	As consumers shift from a narrowband to broadband world we also must confront new questions about how to protect consumer privacy.
23	A0-Wealth	Providers hope to capitalize on a treasure trove of information about their customers interests and habits.
24	C1-Honest	But it is far from clear what consumers are told about these monitoring practices and what protections are in place to safeguard their interests.
25	B1-A varied life	Given the highly personal uses of the Internet from managing bills and investments seeking medical information exploring religious beliefs or conducting a job search -- this trend should give all consumers pause
26	D2-Family security	Given the highly personal uses of the Internet from managing bills and investments seeking medical information exploring religious beliefs or conducting a job search -- this trend should give all consumers pause

37

Future Directions

Values
& IT

- More and larger collections
 - All congressional testimonies
 - NASA oral history archive
 - Trade press
 - Academic journals
 - Blogs
- Tighter integration
 - Keep human coder in the loop
 - Integrate SML and actor-network theory

38

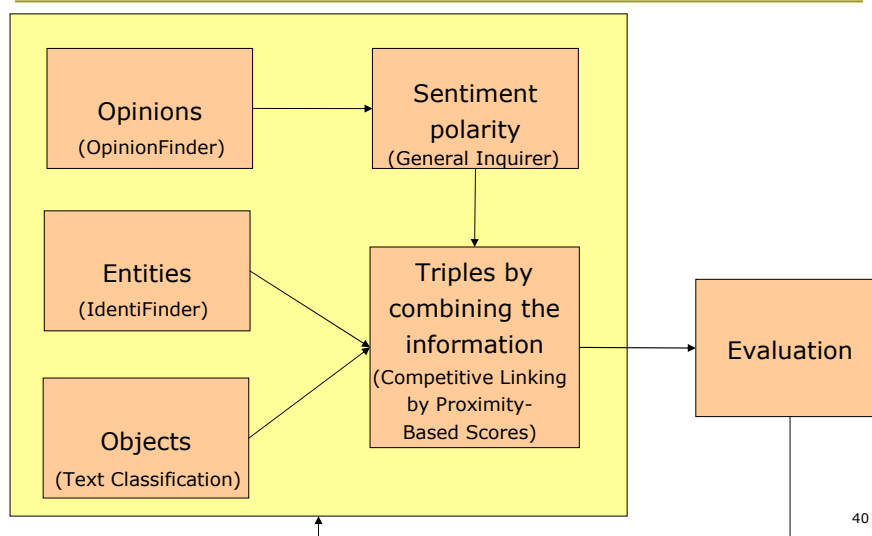

What's Next for PopIT?

- ❑ Improved accuracy
 - Hierarchical multi-label classifiers
- ❑ Additional content types
 - Academic journal articles
 - Blogs
 - Interviews
- ❑ Classification
 - Cross-domain (e.g., trade press : blogs)
 - Non-topical (e.g., sentiment)
 - Social network (e.g., opinion leaders)
- ❑ Integrated systems

39

Sentiment Analysis Plans

40

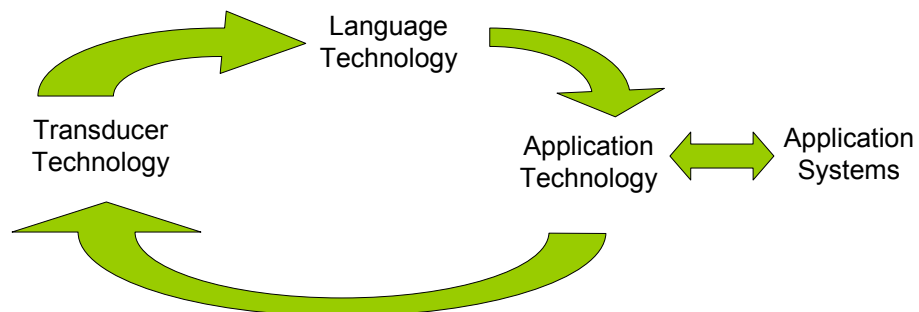

Spanning Disciplines

- ▣ **Coupled models** as “boundary object”
 - Input representation
 - Transformation
 - Output representation
- ▣ Layered uncertainty
 - Meaning of the text
 - Meaning of the coding frame
 - Purpose of the coding frame

PopIT
Scalable Computational Analysis of the Diffusion
of Information Technology Concepts

Welcome!

In any technology field, there is always some set of core concepts that dominate the agenda for research and practice. As a field progresses that set evolves, with new concepts replacing old ones. This project will model the dynamic social system through which technological concepts come to be perceived and understood. The primary research question is: how do the actions and opinions of individual actors give rise to more globally accepted concepts in a technology field, and how do such micro-macro dynamics change over time? That question will be answered by using an iterative process in which computational analysis of text is used to populate a model of salient aspects of social dynamics. Interpretations based on that model will then be used to guide refinement and enrichment of the computational analysis. The "computationally-supported case study" process offers a promising new approach to building and testing theories for social science research. By coupling focused extraction and classification for high-volume multi-source data with a multi-concept computational analysis strategy the project will create a new middle ground between today's richly analyzed but narrowly focused case studies and the presently available scalable but relatively shallow techniques, such as citation analysis. The project will focus on Information Technology as an exemplar field, leveraging the broad and accessible discourse on that topic found in vast collections of formal and informal sources. Text analytic techniques from information retrieval and computational linguistics will be adapted to detect specific concepts, and to connect those concepts with the people who write about them and with attitudes that those people express. An early goal will be to explain the extent to which the popularity of concepts results from social actors' actions and opinions. Contributions of the research are expected to include a scalable analytical framework that can affordably be extended to a broad range of other technologies, and a deeper understanding of the types of leverage that can be obtained from emerging text analytic techniques to enable new approaches to social science research.

This project is supported by the National Science Foundation, Division of Information & Intelligent Systems, Award Number IRI9909 under the Human and Social Dynamics program.
