**CURRENT FOOTPRINT
(COLLEGE FRESHMAN)
VS
FUTURE FOOTPRINT
(IN MY 30'S)**

Reason for differences: The main difference is found within the household category. Currently, I live in a dorm with a couple hundred people using the same energy. In the future, I will live in a smaller space but that house's energy will only be dedicated to four people. Right now, I leave less of a footprint because I share the energy I use with more people when compared to future me's energy consumption.
