

CPSG101 Carbon Footprint

Tanya Niak

	University Freshman	Family of 4, per capita	U.S. Average
Household & Food (tons CO ₂ /year)	4.03	4.45	4.47
Transportation (tons CO ₂ /year)	3.08	1.71	4.82
Air Travel (tons CO ₂ /year)	1	0.25	0.52

- Family having lower per capita carbon footprint than single university freshman --> due to sharing of resources, spreading emissions across multiple individuals & lowering individual carbon footprint
- High air travel for individual university student --> due to traveling long distances (i.e., internationally) every year
- Low transportation (for all) --> due to reduction in use of cars, carpooling, & use of electric car
