UNITS: CO2/YR

Tre' Wilkerson (Past and Future)

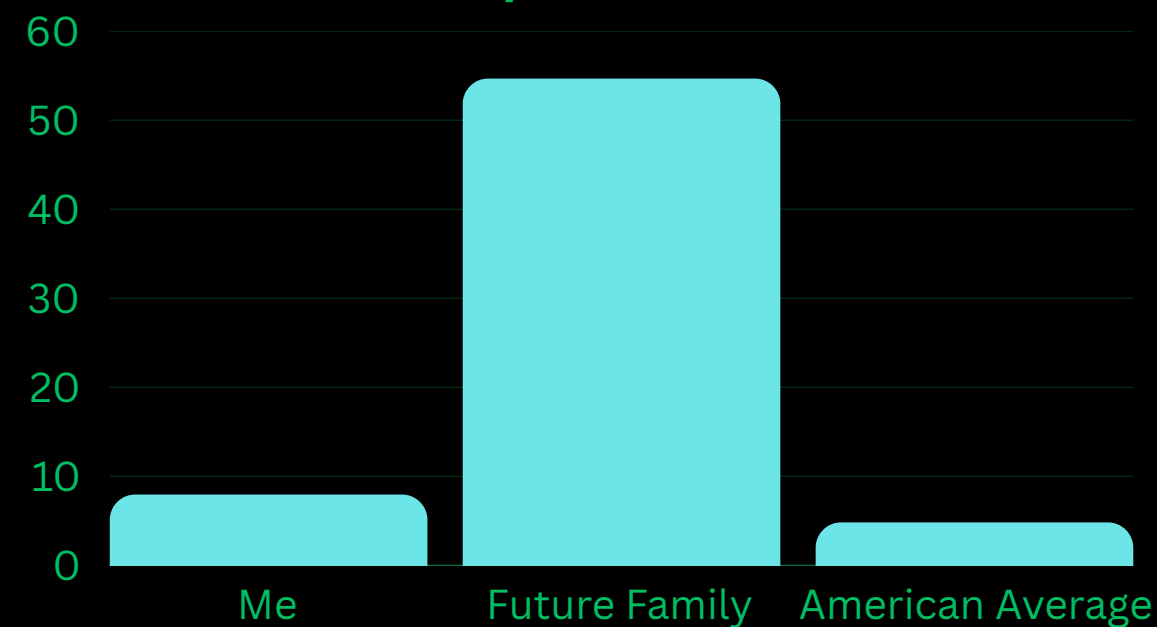

My future family is modeled after my current family (5 people)

Household and Food

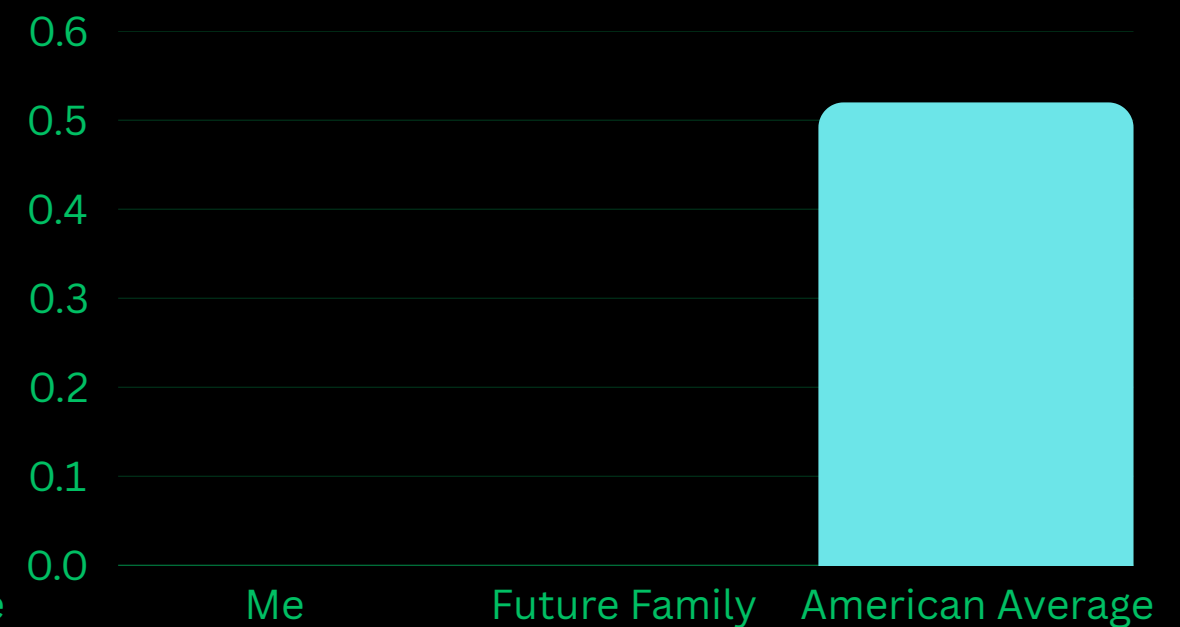

Regarding the household differences, it makes sense that there is very little differentiation amongst the averages, however it does showcase (modeled after my family) that as a household the average (per capita value) does indeed drop when there are more individuals under the same conditions

Transportation

This data set showcases the enormous emissions of a blue collared household, as the lead provider in the family, drives about 50,000 miles all across the state of Maryland! Blue-collar workers work hard and so do their engines.

Air Travel

THE WILKERSONS DONT FLY!!!! All jokes aside this showcases both the fear of planes that isn't only held by their oldest son, but the financial situation regarding the family. To stick current with my model of my family (but as my own version 15 years later) It was chosen to demonstrate that there is 0 emissions from air travel.
