Education

University of Maryland, College Park, MD, 20742

Anticipated May 2025

Bachelor of Science, Computer Science – Machine Learning Track

Minor: Statistics

College Park Scholars Program – Science and Global Change

Anticipated May 2024

Cumulative GPA: 4.0

Relevant Coursework

- Object-Oriented Programming 1 & 2, Organization of Programming Languages
- Calculus 1, 2, & 3, Linear Algebra, Statistics, Discrete Math, Algorithms
- Spring 2024: Data Science, Artificial Intelligence

Experience & Projects

[Shahoveisi Turfgrass Pathology Lab](#)

February 2024 - Present

- Assisted in machine learning related research projects related to identifying and managing turfgrass related diseases at UMD
- Created 3d visualizations of machine learning model output predictions using matplotlib
- Performed automatic hyperparameter optimization on scikit-learn and TensorFlow models to achieve highest metrics
- Performed image dataset processing for use in a Keras deep neural network image classifier using OpenCV

[SimpleTensor](#)

February 2024 - Present

- Created a library which provides Tensors with reverse-mode automatic differentiation capabilities using only numpy arrays for the Intro to Artificial Intelligence (CMSC421) class
- Supports many differentiable n-dimensional tensor operations such as matrix multiplication, convolution, element-wise functions, aggregate functions, and arithmetic operations, with support for operations along any axes
- Created MNIST demo using convolutional, dense, and normalization layers and used techniques such as Xavier/Glorot initialization and residual connections
- Fully documented using sphinx at <https://vikramrangarajan.github.io/SimpleTensor/>

[SimplePyML](#)

August 2023 - Present

- Created Python library to implement and understand machine learning algorithms using numpy and scipy
- Implemented dynamic multilayer perceptron networks with more features to come
- Achieved ~98.6% accuracy with MNIST database after some testing, but not enough testing has been done to find maximum accuracy
- Successfully implemented conditional GPU acceleration using cupy
- Fully documented using sphinx at <https://vikramrangarajan.github.io/simplepyml>

A.M. Best Rating Services, Oldwick, NJ, 08858

October 2023 - January 2024

Data Strategy Engineer

- Responsible for transitioning workflows from Prefect to Apache Airflow
- Learned to use Azure Data Factory (ADF) to transform data on the Azure Cloud Platform
- Used Airflow to orchestrate pipelines on ADF and prepared Airflow features for production use such as notifications, encryption, error handling, and failsafes
- Accelerated a data pipeline from 90 minutes down to 6 minutes

A.M. Best Rating Services, Oldwick, NJ, 08858

June 2023 – July 2023

Data Strategy & Architecture Intern

- Learned to use and manage virtual machines such as Docker containers with services and WSL
- Discovered Apache Airflow's workflow management features and architecture, and presented knowledge to 7 teammates
- Set up and connected to a PostgreSQL database through Airflow to insert live government weather data hourly for over 900 cities nationwide
- Created an ETL pipeline in 2 weeks which automatically extracted data from oracle databases and loaded them to an Azure Data Lake with Pandas as the link
- Followed the software development life cycle to create ETLs and progress them all the way through the testing environment

Technical Skills

Programming Languages: Python, C, Java, OCaml, R, Rust, SAS

Technologies: Git, Linux, SQL, Databases (Postgres, Oracle, SQL Server), Apache Airflow, Docker, TensorFlow, scikit-learn, OpenCV, Azure Cloud Services

Awards & Certifications

Astronomer Certification for Apache Airflow Fundamentals

February 2024

UMD Computer Science Semester Academic Honors

Fall 2022, Spring 2023, Fall 2023

Coursera: Convolutional Neural Networks in Tensorflow

April 2023

Coursera: Introduction to Tensorflow for AI, ML, and Deep Learning

February 2023
